

Petrochemical Packaging Consultancy

Jheir, through its relations around the world can assist in many areas of packing petrochemical products. Petrochemical products could be:

- Solid or liquid products
- Solid products could be powder, flakes, pellets, etc...
- Products could be Polyethylene, polypropylene, PVC, PET and similar products,

Our consultancy could start by recommending filling section layout starting from product inflow from storage silos, all the way to stage where product is loaded on top trailer or container or even bulk into ships. Such consultancy could be:

- a. Consultancy on Factory or filling section layout from silos outlets all the way to product loaded through Factory gates.
- b. Consultancy on machines based on many years of experience in that field. Machines to fill, pack, wrap, weigh, protect, handling robots, print, label, conveyors and many more Used to produce packing units starting from one (1) gram sachets to bulk loadings of twenty tons (20 tons).
- c. Consultancy on packaging materials to be used i.e. continuous tube film, bags, wrapping film, cartons, plastic pallets, wooden pallets, slip sheets, Octabin carton boxes, bulk container liners, jumbo bags, drums, security seals, labels, and many more.
